

GREEN

Electric heating products are 100% energy efficient. Converting every bit of input energy into heat energy. Electric heating is a great GREEN alternative to conventional heating.

Using electricity to heat your home or work place will also reduce your carbon footprint.

- Electric heating will not generate any carbon dioxide
- There is no risk of carbon monoxide release as there is no combustion
- No particulates or emissions in the home
- Electric heating will also contribute to a safe, healthy indoor environment
- Preserves natural resources by reducing the consumption of wood and fossil fuels
- Electric heaters will not add moisture to the indoor environment
- No gas or water leaks caused by mechanical failure or an improper installation

THE ADVANTAGES OF ELECTRIC HEATING

GREEN

Electric heating products are 100% energy efficient. Converting every bit of input energy into heat energy. Electric heating is a great GREEN alternative to conventional heating.

Using electricity to heat your home or work place will also reduce your carbon footprint.

- Electric heating will not generate any carbon dioxide
- There is no risk of carbon monoxide release as there is no combustion
- No particulates or emissions in the home
- Electric heating will also contribute to a safe, healthy indoor environment
- Preserves natural resources by reducing the consumption of wood and fossil fuels
- Electric heaters will not add moisture to the indoor environment
- No gas or water leaks caused by mechanical failure or an improper installation

ELECTRIC HEATING IS SAFE & RELIABLE

Whatever type of heating you choose, safety is always an important consideration. Because electric
